### **HKBK COLLEGE OF ENGINEERING**

Opp to Manyata Techpark, Nagwara, Bangalore – 560 045

## **Vision and Mission of the Institution**

### **Vision**

To empower students through wholesome education and enable the students to develop into highly qualified and trained professionals with ethics and emerge as responsible citizens with a broad outlook to build a vibrant nation.

### **Mission**

- M1.** To achieve academic excellence in science, engineering, and technology through dedication to duty, innovation in teaching, and faith in human values.
- M2.** To enable our students to develop into outstanding professionals with high ethical standards to face the challenges of the 21st century.
- M3.** To provide educational opportunities to the deprived and weaker section of society to uplift their socioeconomic status.

## **Vision and Mission of the AIML Department**

### **Vision**

To advance the intellectual capacity of the nation and the international community by imparting knowledge to graduates who are globally recognized as innovators, entrepreneurs and competent professionals.

### **Mission**

- M1.** To provide excellent technical knowledge and computing skills to make the graduates globally competitive with professional ethics.
- M2.** To be involved in research activities and be committed to lifelong learning to positive contributions to society.

## Programme Educational Objectives

|              |   |
|--------------|---|
| <b>PEO-1</b> | To provide students with a strong foundation in engineering fundamentals and in the computer science and engineering to work in the global scenario.  |
| <b>PEO-2</b> | To provide sound knowledge of programming and computing techniques and good communication and interpersonal skills so that they will be capable of analyzing, designing and building innovative software systems. |
| <b>PEO-3</b> | To equip students in the chosen field of engineering and related fields to enable him to work in multidisciplinary teams.   |
| <b>PEO-4</b> | To inculcate in students professional, personal and ethical attitude to relate engineering issues to broader social context and become responsible citizen.   |
| <b>PEO-5</b> | To provide students with an environment for life-long learning which allow them to successfully adapt to the evolving technologies throughout their professional carrier and face the global challenges.          |

| Programme Outcomes |  |
|--------------------|--|
| <b>a</b>           | <b>Engineering Knowledge:</b> Apply knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.   |
| <b>b</b>           | <b>Problem Analysis: Identify,</b> formulate, research literature and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences   |
| <b>c</b>           | <b>Design/ Development of Solutions:</b> Design solutions for complex engineering problems and design system components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations. |
| <b>d</b>           | <b>Conduct investigations of complex problems</b> using research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of information to provide valid conclusions.  |
| <b>e</b>           | <b>Modern Tool Usage:</b> Create, select and apply appropriate techniques, resources and modern engineering and IT tools including prediction and modeling to complex engineering activities with an under- standing of the limitations.   |
| <b>f</b>           | <b>The Engineer and Society:</b> Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering practice.   |
| <b>g</b>           | <b>Environment and Sustainability:</b> Understand the impact of professional engineering solutions in societal and environmental contexts and demonstrate knowledge of and need for sustainable development.   |
| <b>h</b>           | <b>Ethics:</b> Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice.  |

|                                    |  |
|------------------------------------|--|
| <b>i.</b>                          | <b>Individual and Team Work:</b> Function effectively as an individual, and as a member or leader in diverse teams and in multidisciplinary settings.  |
| <b>j.</b>                          | <b>Communication:</b> Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations and give and receive clear instructions. |
| <b>k</b>                           | <b>Life-long Learning:</b> Recognize the need for and have the preparation and ability to engage in independent and life- long learning in the broadest context of technological change.   |
| <b>l.</b>                          | <b>Project Management and Finance:</b> Demonstrate knowledge and understanding of engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.   |
| <b>Programme Specific Outcomes</b> |  |
| <b>m</b>                           | <b>Problem-Solving Skills:</b> An ability to investigate and solve a problem by analysis, interpretation of data, design and implementation through appropriate techniques, tools and skills.  |
| <b>n</b>                           | <b>Professional Skills:</b> An ability to apply algorithmic principles, computing skills and computer science theory in the modelling and design of computer-based systems.  |
| <b>o</b>                           | <b>Entrepreneurial Ability:</b> An ability to apply design, development principles and management skills in the construction of software product of varying complexity to become an entrepreneur   |

**HKBK** COLLEGE OF  
ENGINEERING  
Established in 1997

**Department of Artificial Intelligence and Machine Learning**

Academic Year: 2024-2025

Semester: 4<sup>TH</sup> EVEN

## **LAB MANUAL**

Subject: **DATABASE MANAGEMENT SYSTEM**

Subject Code: **BCS403**

Period: February 2025 To May 2025

### **Course Learning Objectives:**

- To Provide a strong foundation in database concepts, technology, and practice.
- To Practice SQL programming through a variety of database problems.
- To Understand the relational database design principles.
- To Demonstrate the use of concurrency and transactions in database.
- To Design and build database applications for real world problems.
- To become familiar with database storage structures and access techniques.

### List of Experiments

| Sl No. | Experiments   |
|--------|---|
| 1.     | <p>Create a table called Employee &amp; execute the following.</p> <p><b>Employee (EMPNO, ENAME, JOB, MANAGER_NO, SAL, COMMISSION)</b></p> <ol style="list-style-type: none"> <li>1. Create a user and grant all permissions to the user.</li> <li>2. Insert the any three records in the employee table contains attributes EMPNO, ENAME JOB, MANAGER_NO, SAL, COMMISSION and use rollback. Check the result.</li> <li>3. Add primary key constraint and not null constraint to the employee table.</li> <li>4. Insert null values to the employee table and verify the result.</li> </ol> |
| 2.     | <p>Create a table called Employee that contain attributes EMPNO, ENAME, JOB, MGR, SAL &amp; execute the following.</p> <ol style="list-style-type: none"> <li>1. Add a column commission with domain to the Employee table.</li> <li>2. Insert any five records into the table.</li> <li>3. Update the column details of job</li> <li>4. Rename the column of Employ table using alter command.</li> <li>5. Delete the employee whose Empno is 105.</li> </ol>  |
| 3.     | <p>Queries using aggregate functions(COUNT,AVG,MIN,MAX,SUM),Group by, Order by.</p> <p><b>Employee (E_id, E_name, Age, Salary)</b></p> <ol style="list-style-type: none"> <li>1. Create Employee table containing all Records E_id, E_name, Age, Salary.</li> <li>2. Count number of employee names from employee table</li> <li>3. Find the Maximum age from employee table.</li> <li>4. Find the Minimum age from employee table.</li> <li>5. Find salaries of employee in Ascending Order.</li> <li>6. Find grouped salaries of employees.</li> </ol>                                    |
| 4.     | <p>Create a row level trigger for the customers table that would fire for INSERT or UPDATE or DELETE operations performed on the CUSTOMERS table. This trigger will display the salary difference between the old &amp; new Salary.</p> <p><b>CUSTOMERS(ID,NAME,AGE,ADDRESS,SALARY)</b></p>   |
| 5.     | <p>Create cursor for Employee table &amp; extract the values from the table. Declare the variables, Open the cursor &amp; extract the values from the cursor. Close the cursor.</p> <p><b>Employee(E_id, E_name, Age, Salary)</b></p>   |
| 6.     | <p>Write a PL/SQL block of code using parameterized Cursor, that will merge the data available in the newly created table N_RollCall with the data available in the table O_RollCall. If the data in the first table already exist in the second table then that data should be skipped.</p>  |
| 7.     | <p>Install an Open Source NoSQL Data base MangoDB &amp; perform basic CRUD (Create, Read, Update &amp; Delete) operations. Execute MangoDB basic Queries using CRUD operations.</p>   |

- A. Create a table called Employee & execute the following.

**Employee(EMPNO,ENAME,JOB, MANAGER\_NO, SAL, COMMISSION)**

1. Create a user and grant all permissions to the user.
2. Insert the any three records in the employee table contains attributes EMPNO,ENAME JOB, MANAGER\_NO, SAL, COMMISSION and use rollback. Check the result.
3. Add primary key constraint and not null constraint to the employee table.
4. Insert null values to the employee table and verify the result.

**Query Solution:**

1. CREATE DATABASE EXP1;

USE EXP1;

create user 'user1' identified by 'psd' password expire;

grant 'user1' to 'root'@'localhost';

grant all on EXP1.\* to 'user1';

CREATE TABLE Employee (EMPNO INT, ENAME VARCHAR(100), JOB VARCHAR(100),  
MANAGER\_NO INT, SAL DECIMAL(10, 2), COMMISSION DECIMAL(10, 2));

DESC Employee;

2. INSERT INTO Employee (EMPNO, ENAME, JOB, MANAGER\_NO, SAL, COMMISSION) VALUES  
(101, 'John Doe', 'Manager', 100, 50000, 5000);

INSERT INTO Employee (EMPNO, ENAME, JOB, MANAGER\_NO, SAL, COMMISSION) VALUES  
(102, 'Jane Smith', 'Developer', 101, 60000, 6000);

INSERT INTO Employee (EMPNO, ENAME, JOB, MANAGER\_NO, SAL, COMMISSION) VALUES  
(103, 'Jim Brown', 'Analyst', 101, 55000, 5500);

SELECT \* FROM Employee;

3. ALTER TABLE Employee ADD PRIMARY KEY (EMPNO);

//Adding NOT NULL constraints

ALTER TABLE Employee MODIFY ENAME VARCHAR(100) NOT NULL;

ALTER TABLE Employee MODIFY JOB VARCHAR(100) NOT NULL;

ALTER TABLE Employee MODIFY SAL DECIMAL(10, 2) NOT NULL;

DESC Employee;

4. INSERT INTO Employee (EMPNO, ENAME, JOB, SAL) VALUES (104, NULL, 'Tester', NULL);  
INSERT INTO Employee (EMPNO, ENAME, JOB, SAL) VALUES (104, 'James', NULL ,60000);

**Output:**

4.

Column 'ENAME' cannot be null

Column 'SAL' cannot be null

Column 'JOB' cannot be null

- B.** Create a table called Employee that contain attributes **EMPNO,ENAME,JOB, MGR,SAL** & execute the following.
1. Add a column commission with domain to the Employee table.
  2. Insert any five records into the table.
  3. Update the column details of job
  4. Rename the column of Employ table using alter command.
  5. Delete the employee whose Empno is 105.

Solution:

1. 

```
CREATE TABLE Employee (EMPNO INT, ENAME VARCHAR(100),JOB VARCHAR(100),MGR INT,SAL DECIMAL(10, 2));
```

```
ALTER TABLE Employee ADD COMMISSION DECIMAL(10, 2) CHECK (COMMISSION >= 0 OR COMMISSION IS NULL);
```
2. 

```
INSERT INTO Employee (EMPNO, ENAME, JOB, MGR, SAL, COMMISSION) VALUES
```

```
(101, 'John Doe', 'Manager', 100, 75000, 5000),
```

```
(102, 'Jane Smith', 'Developer', 101, 60000, 3000),
```

```
(103, 'Jim Beam', 'Analyst', 102, 55000, 2500),
```

```
(104, 'Jill Hill', 'Salesperson', 103, 45000, 2000),
```

```
(105, 'Jack Black', 'Support', 101, 40000, 1500);
```
3. 

```
UPDATE Employee SET JOB = 'Senior Salesperson' WHERE EMPNO = 104;
```
4. 

```
ALTER TABLE Employee RENAME COLUMN MGR TO MANAGER_ID;
```
5. 

```
DELETE FROM Employee WHERE EMPNO = 105;
```

```
SELECT * FROM Employee;
```

**C. Queries using aggregate functions(COUNT,AVG,MIN,MAX,SUM),Group by, Order by.****Employee(E\_id, E\_name, Age, Salary)**

1. Create Employee table containing all Records E\_id, E\_name, Age, Salary.
2. Count number of employee names from employee table
3. Find the Maximum age from employee table.
4. Find the Minimum age from employee table.
5. Find salaries of employee in Ascending Order.
6. Find grouped salaries of employees.

**Solution:**

1. CREATE TABLE Employee (E\_id INT PRIMARY KEY,E\_name VARCHAR(100),Age INT,Salary DECIMAL(10, 2));
2. SELECT COUNT(E\_name) FROM Employee;  
SELECT COUNT(DISTINCT E\_name) FROM Employee;
3. SELECT MAX(Age) FROM Employee;
4. SELECT MIN(Age) FROM Employee;
5. SELECT Salary FROM Employee ORDER BY Salary ASC;
6. SELECT Salary, COUNT(\*) AS Number\_of\_Employees FROM Employee GROUP BY Salary ORDER BY Salary;

- D.** Create a row level trigger for the customers table that would fire for INSERT or UPDATE or DELETE operations performed on the CUSTOMERS table. This trigger will display the salary difference between the old & new Salary.

**CUSTOMERS(ID,NAME,AGE,ADDRESS,SALARY)**

Solution:

SQL>create table customers (id number(10), name varchar2(30), age number(10), address varchar2(50), salary number(10));

1. insert into customers (id, name, age, address, salary) values(101,'Kumar',45, 'Bengalure',20000);
2. insert into customers (id, name, age, address, salary) values(102,'Rohan',42, 'Tumkuru', 10000);
3. insert into customers (id, name, age, address, salary) values(103,'Kumar',38, 'Belagavi', 9000);
4. insert into customers (id, name, age, address, salary) values(104,'Chandu',35, 'Tiptur ', 9000);

SQL> select \* from employee;

- F.** Write a PL/SQL block of code using parameterized Cursor, that will merge the data available in the newly created table N\_RollCall with the data available in the table O\_RollCall. If the data in the first table already exist in the second table then that data should be skipped.

Solution:

DECLARE

-- Declare variables to store values from the cursor

n\_id N\_RollCall.id%TYPE;

n\_name N\_RollCall.name%TYPE;

n\_date N\_RollCall.date%TYPE;

-- Declare a cursor with parameters to fetch data from N\_RollCall

CURSOR merge\_cursor IS

SELECT id, name, date FROM N\_RollCall;

BEGIN

-- Open the cursor

OPEN merge\_cursor;

-- Loop through the cursor records

FOR merge\_rec IN merge\_cursor LOOP

-- Check if the record already exists in O\_RollCall

SELECT id INTO n\_id

FROM O\_RollCall

WHERE id = merge\_rec.id;

-- If the record doesn't exist, insert it into O\_RollCall

IF n\_id IS NULL THEN

INSERT INTO O\_RollCall (id, name, date)

VALUES (merge\_rec.id, merge\_rec.name, merge\_rec.date);

DBMS\_OUTPUT.PUT\_LINE('Data merged for ID: ' || merge\_rec.id);

ELSE

DBMS\_OUTPUT.PUT\_LINE('Data already exists for ID: ' || merge\_rec.id || ', skipping...');

END IF;

END LOOP;

-- Close the cursor

CLOSE merge\_cursor;

-- Commit the transaction

COMMIT;

EXCEPTION

WHEN OTHERS THEN

-- Handle exceptions if any

DBMS\_OUTPUT.PUT\_LINE ('An error occurred: ' || SQLERRM);

ROLLBACK;

END;

/

**OR**

**SQL>** create table N\_RollCall (roll number(10), name varchar2(30));

**Insert atleast five rows into the N\_RollCall table.**

1. insert into N\_RollCall (roll,name) values(101,'Kumar');

2. insert into N\_RollCall (roll,name)values(102,'Rohan');
3. insert into N\_RollCall (roll,name) values(103,'Kumar');
4. insert into N\_RollCall (roll,name) values(104,'Chandu');
5. insert into N\_RollCall (roll,name) values(105,'Keerthi');

**SQL>** select \* from N\_RollCall;

| Results | Explain | Describe | Saved SQL | History |
|---------|---------|----------|-----------|---------|
|         |         |          |           |         |
| ROLL    | NAME    |          |           |         |
| 101     | Kumar   |          |           |         |
| 102     | Rohan   |          |           |         |
| 103     | Kumar   |          |           |         |
| 104     | Chandu  |          |           |         |
| 105     | Keerthi |          |           |         |

5 rows returned in 0.00 seconds [CSV Export](#)

Create a table called O\_RollCall & execute the following.

**O\_RollCall (ROLL,NAME)**

**SQL>** create table O\_RollCall (roll number(10), name varchar2(30));  
**Insert atleast five rows into the O\_RollCall table.**

1. insert into O\_RollCall (roll,name) values(201,'Abhi');
2. insert into O\_RollCall (roll,name)values(202,'Rohit');
3. insert into O\_RollCall (roll,name) values(203,'Kumar');
4. insert into O\_RollCall (roll,name) values(204,'Chandu');
5. insert into O\_RollCall (roll,name) values(505,'Keerthi');

**SQL>** select \* from O\_RollCall;

| Results | Explain | Describe | Saved SQL | History |
|---------|---------|----------|-----------|---------|
| ROLL    | NAME    |          |           |         |
| 201     | Abhi    |          |           |         |
| 202     | Rohit   |          |           |         |
| 203     | Kumar   |          |           |         |
| 204     | Chandu  |          |           |         |
| 505     | Keerthi |          |           |         |

5 rows returned in 0.00 seconds      [CSV Export](#)

**SQL>**

DECLARE

CURSOR c1 IS SELECT \* FROM O\_RollCall;  
roll\_no number; counter number(10);

BEGIN

counter:=0;

FOR c1\_rec IN c1 LOOP

select count(\*) into roll\_no from N\_RollCall where roll=c1\_rec.roll;

if roll\_no=0 then

INSERT INTO N\_RollCall VALUES (c1\_rec.roll, c1\_rec.name);

counter:=counter+1;

end if;

END LOOP;

COMMIT;

**G.** Install an Open Source NoSQL Data base MongoDB & perform basic CRUD(Create, Read, Update & Delete) operations. Execute MongoDB basic Queries using CRUD operations.

Solution:

Procedure to install MongoDB:

- Visit MongoDB official website: <https://www.mongodb.com/try/download/community>
- Click the download button for the Windows
- Run the installer: Once downloaded, run the MSI file and follow the installation wizard. Choose the “Complete” installation.
- Download MongoDB Shell from official website: <https://www.mongodb.com/try/download/shell>
- Click the download button for the Windows
- Run the installer: Once downloaded, double click the zip folder and double click on mongosh.exe application
- To start MongoDB server and connect to MongoDB: Enter the MongoDB connection string in MongoDB shell command prompt  
mongo

MongoDB basic Queries using CRUD operations:

- To create Database  
mongo> use myNewDb
- create / insert operation  
myNewDb> db.myCollection.insertOne({name:"yourName",age:"27",profession:"Engineer" })  
myNewDb> db.myCollection.insertMany([ {name: "Jane", age: 25, profession: "Designer"},  
{name: "Bob", age: 35, profession: "Manager"}])
- read query operations  
myNewDb>db.myCollection.findOne({ name: "John"})  
myNewDb>db.myCollection.find({ })
- update operations  
myNewDb>db.myCollection.updateOne({ name: "John"}, {\$set: {age: 31} })  
myNewDb>db.myCollection.updateMany({profession: "Engineer"}, {\$set: {status: "Active"}})
- delete operations  
db.myCollection.deleteOne({ name: "John"})  
db.myCollection.deleteMany({profession: "Engineer"})

**OR**

MongoDB is an open-source document-oriented database. It is categorized under the NoSQL(Not only SQL) database because the storage and retrieval of data in MongoDB are not in the form of tables.

Requirements to Install MongoDB on Windows:

MongoDB 4.4 and later only support 64-bit versions of Windows.

MongoDB 7.0 Community Edition supports the following 64-bit versions of Windows on

x86\_64 architectures:

Windows Server 2022

Windows Server 2019

Windows 11

Ensure that the user is running mongod and mongos has the necessary permissions from the following groups:

Performance Monitor Users

Performance Log Users

### Install MongoDB:

Step1: To install MongoDB on windows, first, download the MongoDB server and then install the MongoDB shell.

Step 2: When the download is complete open the msi file and click the next button in the startup screen:

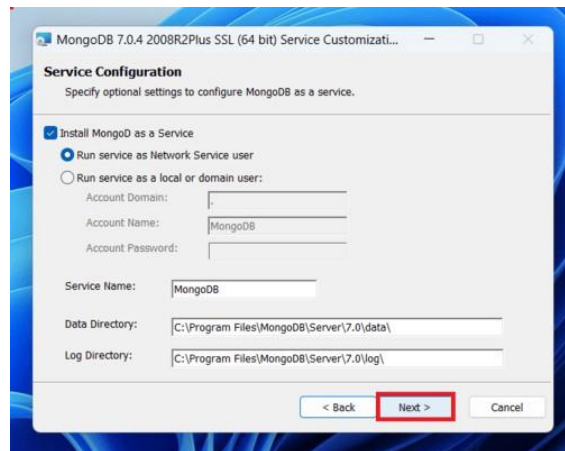

Step 3: Now accept the End-User License Agreement and click the next button:

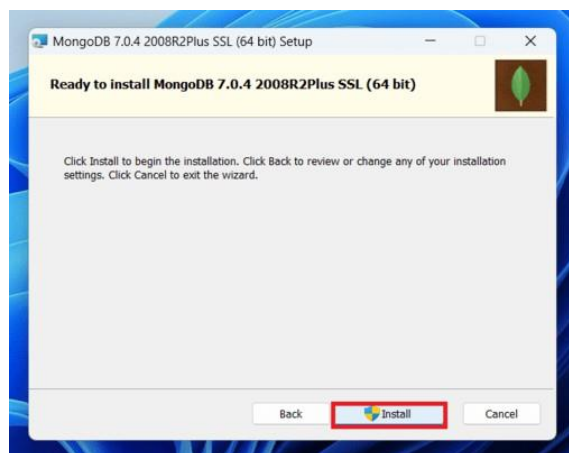

Step 4: Now select the complete option to install all the program features

Step 5: Select “Run service as Network Service user” and copy the path of the data directory. Click Next:

Step 6: Click the Install button to start the MongoDB installation process:

Step 7: After clicking on the install button installation of MongoDB begins:

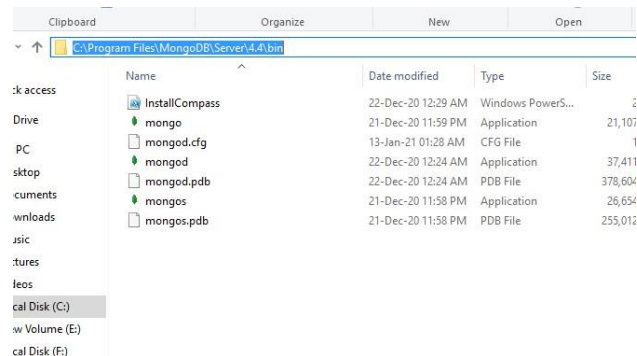

Step 8: Now click the Finish button to complete the MongoDB installation process:

Step 9: Now we go to the location where MongoDB installed in step 5 in your system and copy the bin path:

Step 10: Now, to create an environment variable open system properties << Environment Variable << System variable << path << Edit Environment variable and paste the copied link to your environment system and click Ok:

Step 11: After setting the environment variable, we will run the MongoDB server, i.e. mongod. So, open the command prompt and run the following command:

```
mongod
```

When you run this command you will get an error i.e. C:/data/db/ not found.

Step 12: Now, Open C drive and create a folder named “data” inside this folder create another folder named “db”. After creating these folders. Again open the command prompt and run the following command:

```
mongod
```

Now, this time the MongoDB server(i.e., mongod) will run successfully.

```
C:\Users\Nikhil Chhipa>mongod

### Run mongo Shell

Step 13: Now we are going to connect our server (mongod) with the mongo shell. So, keep that mongod window and open a new command prompt window and write mongo. Now, our mongo shell will successfully connect to the mongod.

**Install an Open Source NoSQL Data base MangoDB.**

## SOLUTION:

### SQL>

perform basic CRUD (Create, Read, Update & Delete) operations. Execute MangoDB basic Queries using CRUD operations.

### CREATE OPERATION

## SOLUTION:

Create a New Database Using

Mongo Shell use college

Show List of Databases show dbs

Check Current Database

db

## Create Operations

| Method                                  | Description  |
|---|--|
| <code>db.collection.insertOne()</code>  | It is used to insert a single document in the collection.  |
| <code>db.collection.insertMany()</code> | It is used to insert multiple documents in the collection. |
| <code>db.createCollection()</code>      | It is used to create an empty collection.                  |

### Exercise1:

**Insert Single Document** `db.student.insert({Name: "Akshay", Marks: 500}) db.student.find().pretty()`

`db.student.insertOne({Name: "Akshay", Marks: 500})`

`db.student.insertOne({_id: "Stu102", Name: "Vishal", Marks: 230})`

`db.student.insertMany([ {name:"Ajay",age:20},`

`{name:"Bina",age:24},`

`{name:"Ram",age:23}]) db.student.insertMany([ {_id:"stu200", name:"Ammu", age:18},`

`{_id:"stu201", name:"Priya", age:29}])`

In MongoDB, the `Bulk.insert()` method is used to perform insert operations in bulk. `var bulk =`

`db.students.initializeUnorderedBulkOp();`

`bulk.insert( { first_name: "Sachin", last_name: "Tendulkar" } );`

`bulk.insert( { first_name: "Virender", last_name: "Sehwag" } );`

`bulk.insert( { first_name: "Shikhar", last_name: "Dhawan" } );`

`bulk.insert( { first_name: "Mohammed", last_name: "Shami" } ); bulk.insert( { first_name: "Shreyas", last_name: "Iyer" } );`

`bulk.execute();`

### READ OPERATION

### SOLUTION:

`db.student.find({age:18})`

`db.student.find()`

`db.student.find({score:{math: 230, science: 234}})`

`db.student.findOne({language:"c++"})`

`db.student.findOne({name: "Avinash"}, {_id: 0, language:1})`

**UPDATE OPERATION****SOLUTION:**

```
db.student.update({ name:"avi" }, { $set: { name:"helloword" } })
```

```
db.student.update({ name:"prachi" }, { $set: { age:20 } })
```

```
db.student.updateOne({ name: "Annu" }, { $set: { age:25 } })
```

```
db.student.updateOne({ name:"Bhannu" }, { $set: { name:"Babita" } })
```

**DELETE OPERATION****SOLUTION:**

```
db.student.remove({ name: "Akshay" })
```

```
db.student.remove({ })
```

```
db.student.remove({ age: { $eq: 18 } }, true) db.student.deleteOne({ age: 17 })
```

```
db.student.deleteOne({ age: { $lt: 18 } })
```
